

PHASE-END PROJECT

CAMERA RENTAL APPLICATION

Main objective of this application: -

- To provide an error free application to demonstrate the flow of camera rental process.
- Maintains the record of the camera rental application of camera model/equipment, record of rent, price, date, rents, user and so on.

Modules of this application: -

- Admin: The module will allow Admin to log in to the system and admin can ADD/VIEW/UPDATE/DELETE different camera equipment details. More-over admin can View/Confirm/Cancel bookings, manage registrations, can check payments, etc.
- Camera Registration: This stage will add the details of the camera regarding its features.
- Category: This whole sector would be fully demonstrated by the admin access.
- Availability: Admin would have access regarding the availability of camera
- Rental: Users can rent their choice-based camera based on the need and availability
- Payment: Method of payment would be categorized based upon the model rent and fine would be made on the penalty.

Application features: -

- The user can add a new camera, along with its details, to the existing camera list.
- The application can display the list of cameras available for rent.
 - The list will include details like the camera brand, model, and per-day rent amount.
- The user can select a camera to rent for a day.

User roles of camera rental system: -

Admin:

- Can **Log In/Log Out** of the system.
- Admin can **View/Edit/Delete** camera equipment into the system.
- Can **View/Edit/Delete** camera equipment category into the system.
- Admin can **View/Confirm/Cancel** the booking by the User.
- Can check payments done by User.
- Can change charges of camera equipment

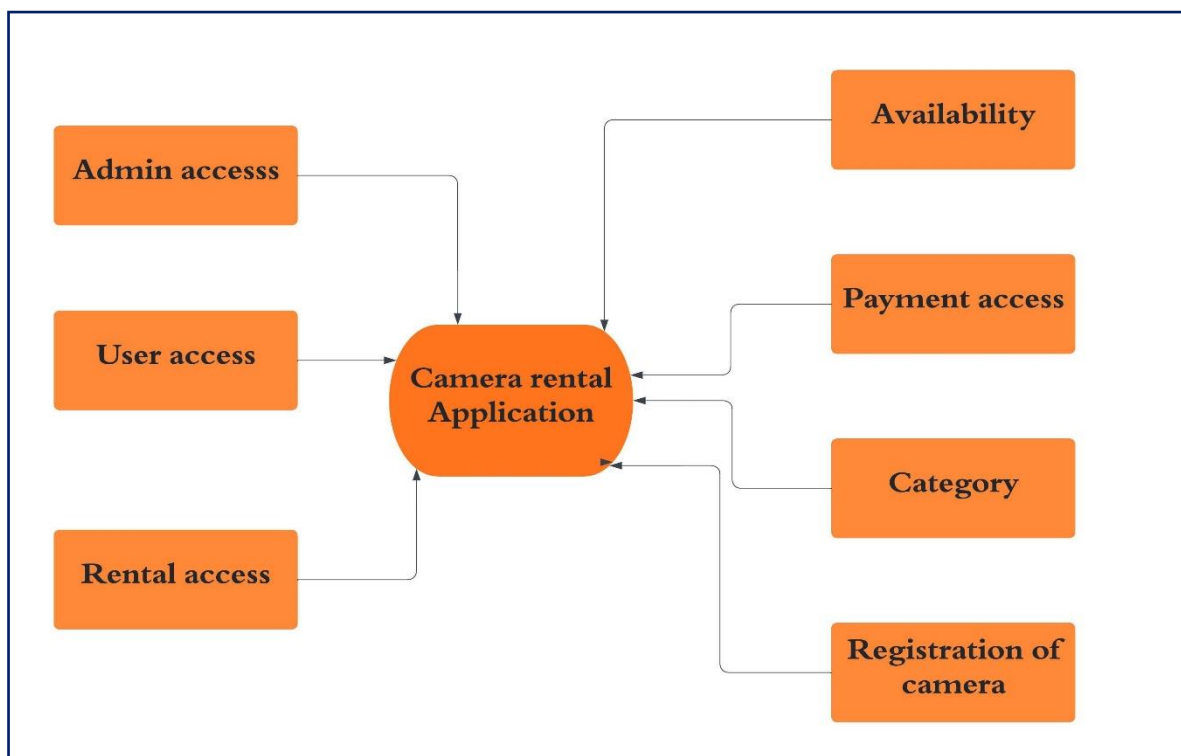

User:

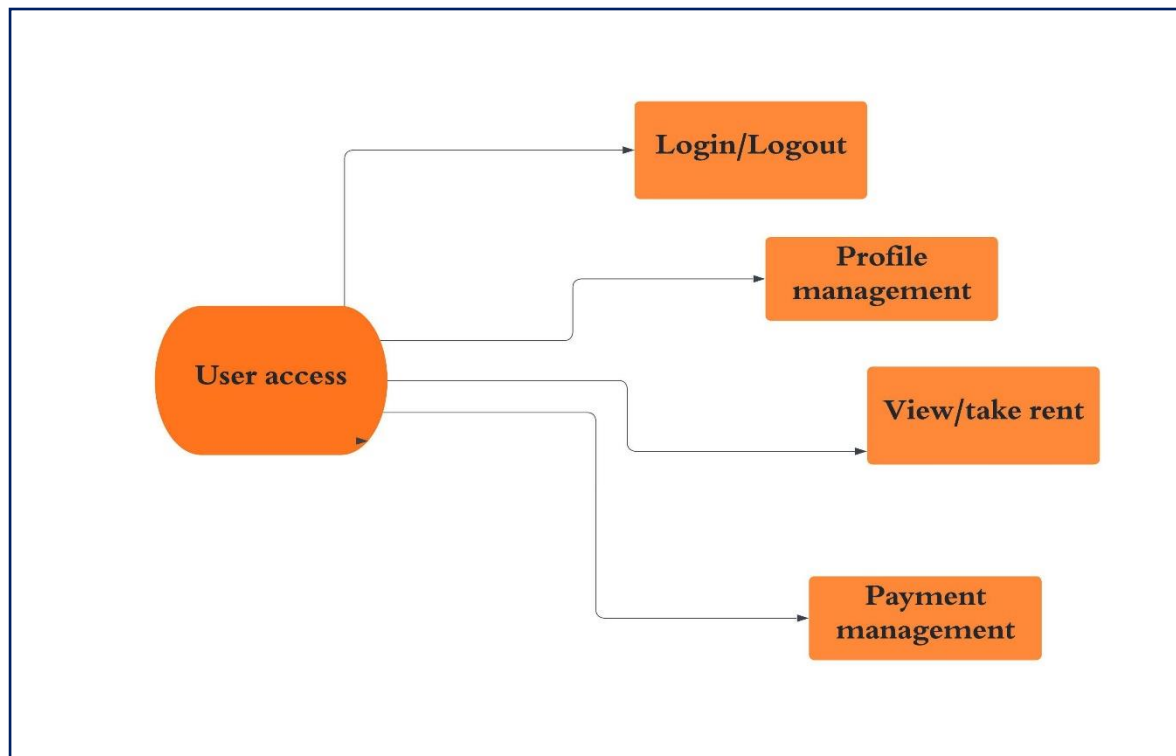

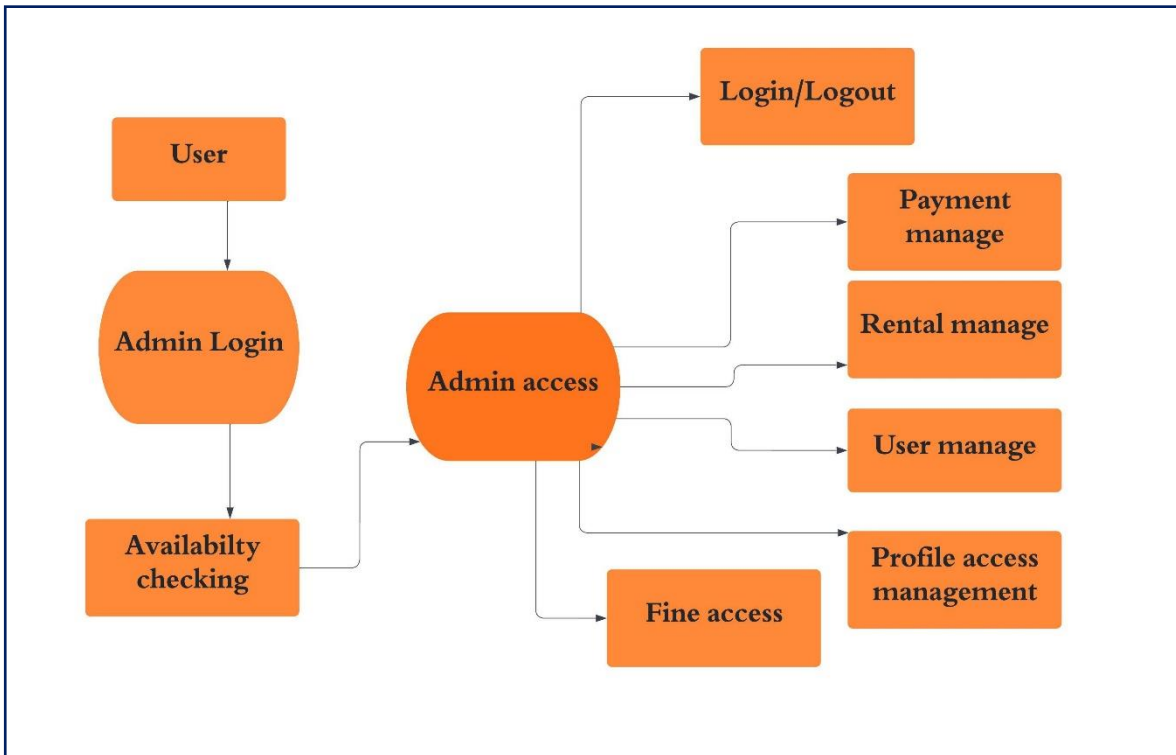

- Can **Log In/Log Out** of the system.
- Can Manage “**My Profile**”.
- Can search for **camera equipment**.
- Users can rent **camera equipment**.
- Users can check availability of camera
- Can make payments online.
- Can change password.

Summarized flow:

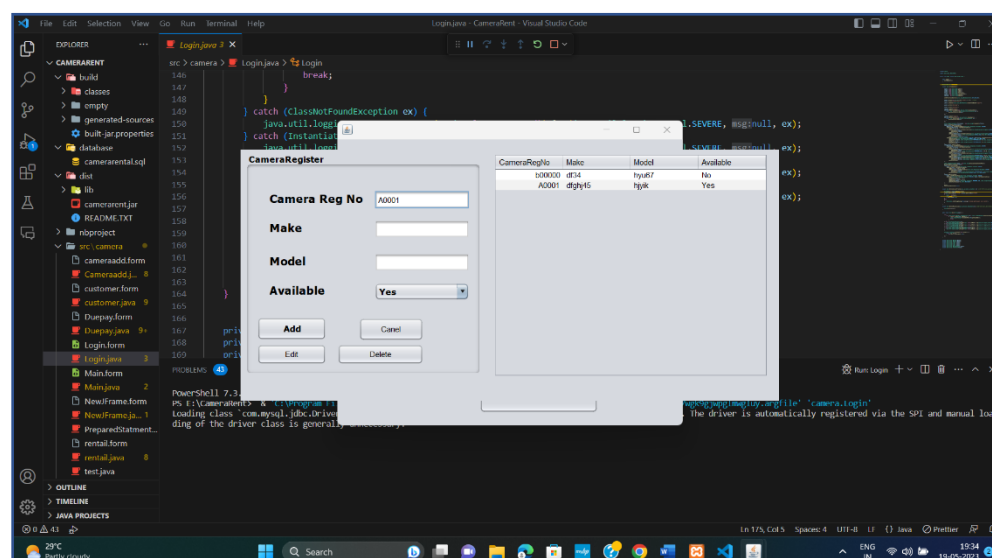

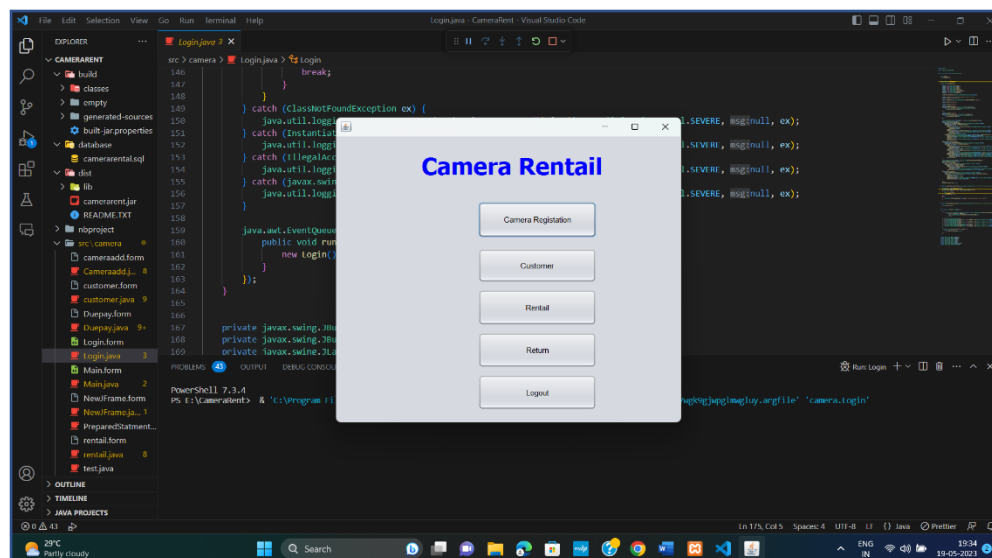

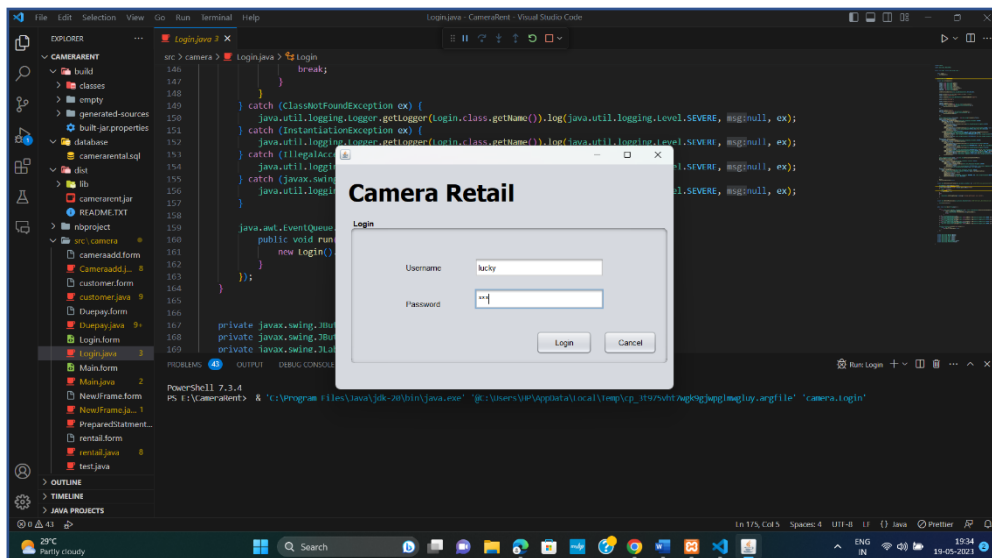

The project has fully been made based on the java workflow and with MySQL and not only the project has been made but also it has been connected with phpMyAdmin to demonstrate the storing and retrieving of data and records. More-over the whole process has been designed with full assurance for an user so as to work smoothly. For the betterment of the system, it has been assigned with the server so as to have a clear state idea-based application flow.

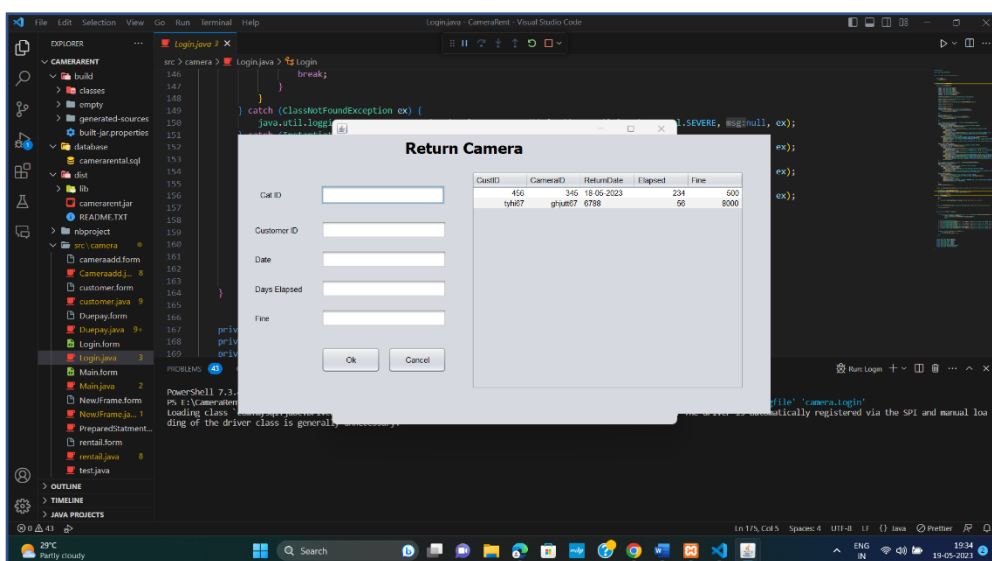

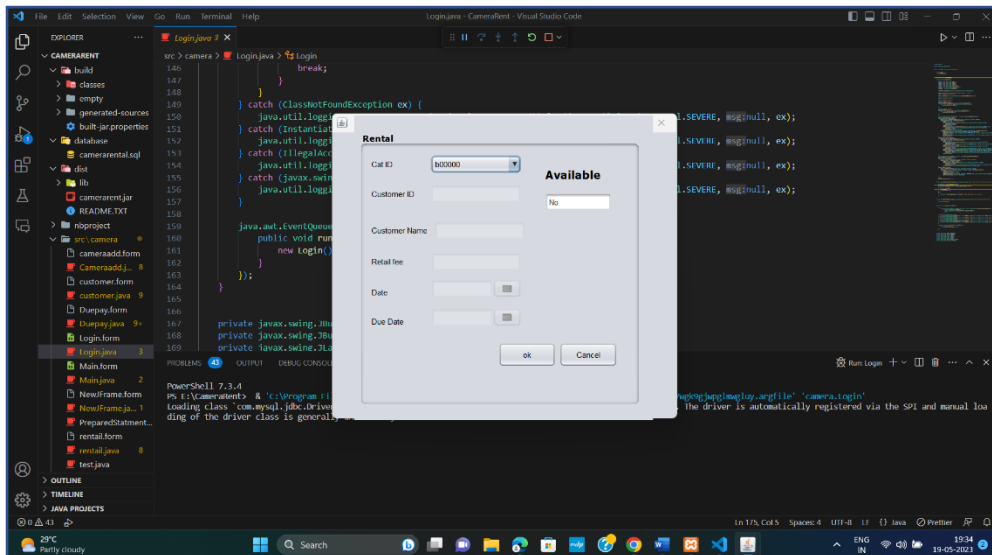

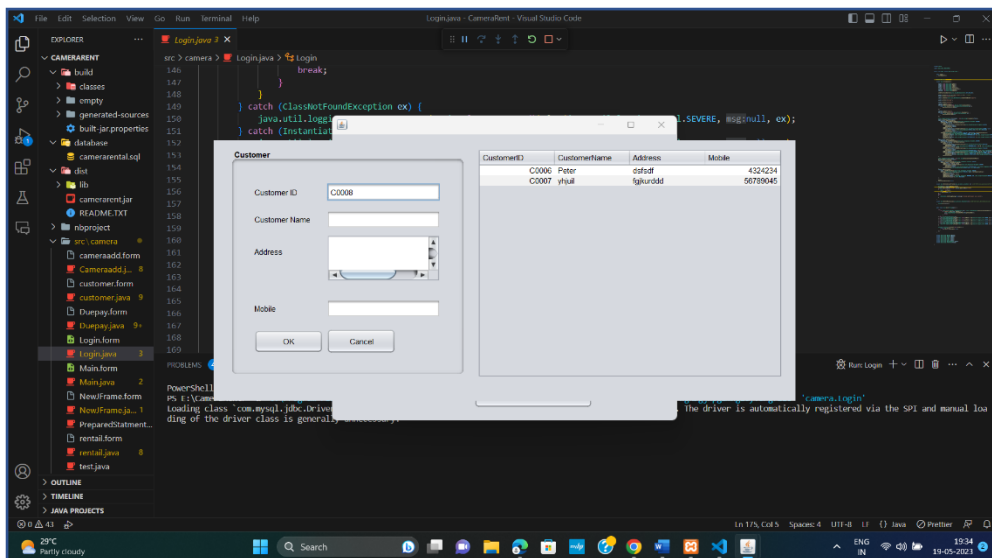

Flow diagram:

Screenshots of the workflow of the program output:

Database connection:

The screenshot shows the phpMyAdmin interface for a database named 'cam'. The left sidebar shows the database structure with 'camera_reg' selected. The main panel displays the 'camera_reg' table structure and data. The table has columns: id, camera_reg, make, model, and available. The data shows two rows: one with id 10, camera_reg 'd3d4', make 'hyu57', model 'No', and available 'No'; and another with id 11, camera_reg 'd3d45', make 'hyik', model 'Yes', and available 'Yes'.

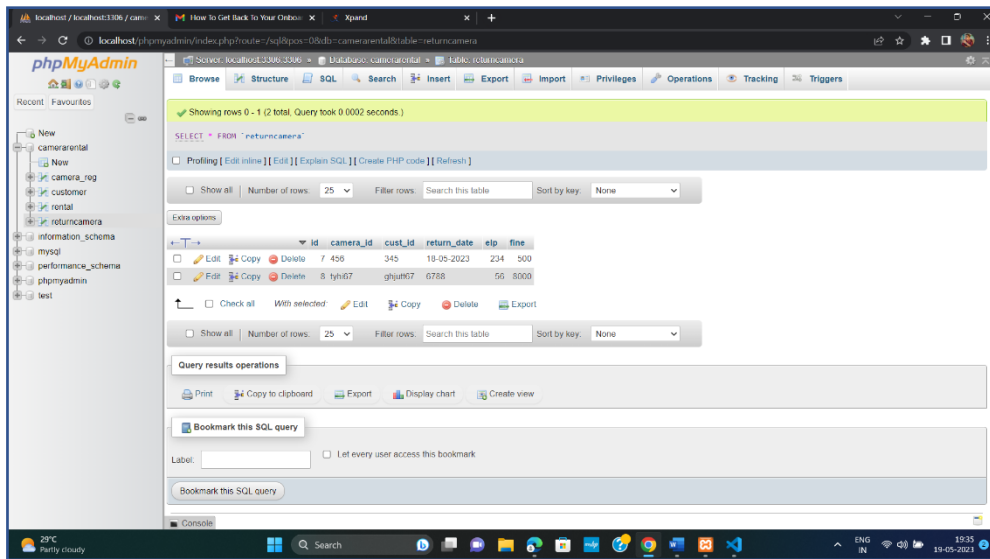

id	camera_reg	make	model	available
10	d3d4	hyu57	No	No
11	d3d45	hyik	Yes	Yes

The screenshot shows the phpMyAdmin interface for a database named 'cam'. The left sidebar shows the database structure with 'customer' selected. The main panel displays the 'customer' table structure and data. The table has columns: id, cust_id, name, address, and mobile. The data shows two rows: one with id 6, cust_id 'C0006', name 'Peter', address 'dsd4', and mobile '4324234'; and another with id 7, cust_id 'C0007', name 'yngui', address 'fgkurdidd', and mobile '56789045'.

id	cust_id	name	address	mobile
6	C0006	Peter	dsd4	4324234
7	C0007	yngui	fgkurdidd	56789045

The screenshot shows the phpMyAdmin interface for a database named 'cam'. The left sidebar shows the database structure with 'rental' selected. The main panel displays the 'rental' table structure and data. The table has columns: id, camera_id, cust_id, fee, date, and due. The data shows one row: id 23, camera_id '500000', cust_id '1234', fee '600', date '2023-05-03', and due '2023-05-17'.

id	camera_id	cust_id	fee	date	due
23	500000	1234	600	2023-05-03	2023-05-17
